

Deloitte Job Simulation

Task 2 – Forensic Technology

Background

Daikibo received complaints that men and women may not be getting paid equally.

The Forensic Technology team created an **Equality Score** for each job role in each factory.

The score ranges from:

-100 to +100

Where:

0 = Perfect Equality

Meaning of Equality Score

Score	Meaning
0	Men and women paid equally
Small positive/negative value	Slight difference
Large positive/negative value	Big difference
Very large positive/negative value	Serious discrimination

Your Task

The Excel file has:

Factory Job Role Equality Score

You need to add:

| Equality Class |

Classification Rules

Fair

If score is between:

-10 and +10

Examples:

Score	Class
0	Fair
5	Fair
-9	Fair
10	Fair

Unfair

If score is:

Less than -10 OR Greater than 10

but not beyond ± 20 .

Examples:

Score	Class
15	Unfair
-15	Unfair
18	Unfair

Highly Discriminative

If score is:

Less than -20 OR Greater than 20

Examples:

Score	Class
25	Highly Discriminative
-30	Highly Discriminative
50	Highly Discriminative

Formula Used

In Excel cell D2:

=IF(ABS(C2)>20,"Highly Discriminative",IF(ABS(C2)>10,"Unfair","Fair"))

ABS stands for **Absolute Value**.

It means:

👉 Ignore the + (plus) or - (minus) sign and take only the number.

Examples

Number ABS(Number)

25	25
-25	25
10	10
-10	10
0	0

Why use ABS in Task 2?

We want to treat:

+25 and -25

the same way because both show a large pay inequality.

Example:

ABS(-25)

Result:

25

Since $25 > 20$, Excel returns:

Highly Discriminative

Without ABS

If we only checked:

$C2 > 20$

then:

Score Result

25 Highly Discriminative

-25 Not detected ❌

That would be wrong.

Easy Memory Trick

ABS = Remove the sign

Examples:

$ABS(-30) = 30$

$ABS(30) = 30$

$ABS(-5) = 5$

That's why the formula:

$=IF(ABS(C2)>20,"Highly Discriminative",IF(ABS(C2)>10,"Unfair","Fair"))$

works for both positive and negative Equality Scores. ✅

How the Formula Works

Example 1

Score:

-25

$ABS(-25) = 25$

$$25 > 20$$

Result:

Highly Discriminative

Example 2

Score:

$$15$$

$$\text{ABS}(15) = 15$$

$$15 > 10$$

Result:

Unfair

Example 3

Score:

$$-5$$

$$\text{ABS}(-5) = 5$$

$$5 \leq 10$$

Result:

Fair

Final Steps

1. Open **Equality Table.xlsx**

2. Add column:

Equality Class

3. Paste formula in D2

4. Fill down all rows

5. Save file

6. Upload Excel file to Deloitte

Final Summary

The task helps identify whether pay differences for each job role are:

✅ Fair

⚠️ Unfair

🔥 Highly Discriminative

based on the Equality Score provided by the Forensic Technology team.
